Harvest Electronics

ITU G2 Nano Installation

Placement & Installation

Ensure there is adequate network coverage at the site before installation. Harvest uses Vodafone or Spark.

The solar panel **must face North** to ensure the solar panel receives maximum sunlight.

The Nano's mounting bracket is designed to be mounted to a 2 inch galvanised pipe (50-60mm OD) or screwed into a wall or post.

- Screw the antenna whip onto the antenna base.
- Mount the Nano ensuring that the antenna is not up against a wall or metal object.
- Plug in the 4-way 'power in' screw terminals.

Checking System Operation

Once installation is complete please call Harvest during business hours on +64 6 370 1991 or free phone on 0800 HARVEST (0800 427 8378). From there we will confirm the unit is calling, set up your Harvest website and arrange the sending of consent data to your regional council.

At any point in time you can view your data on the Internet by going to your unit's website - e.g. if your unit's HSN is 20000, your website is www.harvest.com/20000.

After Hours Support

After hours assistance is available by calling +64 6 370 1991. However, non-urgent after-hours support calls will cost $75p/h.
